

York University's
Perceptual Neuroscience Lab
Is looking for participants!

We are looking for **healthy adult volunteers between 70 – 85 years of age**, with no neurological illnesses to participate in ongoing studies at York University

Study takes approximately 2 hours

Vision Assessment and Visual Health Related Questionnaires

Participants will be asked to complete various questionnaires investigating their overall health. Vision testing will also be conducted.

MRI Scan

We will conduct brain imaging using magnetic resonance imaging (MRI) at the York MRI Facility. You may receive a picture of your brain when the study is completed! You will also be compensated for your travel and participation.
